Career Objective

Final-year AI/ML Engineering student specializing in MLOps, Generative AI, and Computer Vision with hands-on experience deploying containerized models. Seeking an AI/ML engineering internship to apply my expertise in scalable data pipelines and production-ready microservices while growing within a fast-paced engineering team.

Education

Jaypee University of Engineering and Technology

July 2023 – Present

B.Tech in Computer Science and Engineering (CGPA: 8.2 / 10)

Guna, Madhya Pradesh

Relevant Coursework: Machine Learning, Artificial Intelligence, Linear Algebra, Probability & Statistics, Data Structures & Algorithms

Projects

Multi-Agent Research System | [GitHub](#) | [Live Demo](#)

May 2026 – June 2026

Python, LangGraph, FastAPI, AWS EC2, LLaMA-3 70B

- Accelerated research workflows by **22x** (30 mins to 80 secs) by architecting a 4-agent LLM pipeline using LangGraph and LLaMA-3.
- Achieved a **66.5%** fact-check pass rate by implementing a dedicated LLM verification agent to detect and filter hallucinations prior to synthesis.
- Minimized token usage and API costs by engineering a production-ready FastAPI backend on AWS EC2, leveraging Mem0 for context-aware session memory.

RAG Eval Studio | [GitHub](#) | [Live Demo](#)

March 2026 – April 2026

Python, Qdrant, RAGAS, LangSmith, LangChain, AWS S3

- Achieved **0.79** answer relevancy across **5,500+** pages of SEC filings by engineering a hybrid RAG system (Qdrant, BM25) with a Hugging Face embedding pipeline.
- Validated response quality without self-evaluation bias by benchmarking generation against a 70B judge model via RAGAS and tracing queries in LangSmith.
- Streamlined data updates by automating PDF ingestion from AWS S3 using Pandas and establishing a GitHub Actions CI/CD pipeline.

Plant Disease Classification | [GitHub](#) | [Live Demo](#)

September 2025 – December 2025

Python, CNNs, TensorFlow, FastAPI, Docker

- Achieved **96.4%** test accuracy across 3 disease classes by fine-tuning a MobileNetV2 architecture on **3,000** images via transfer learning.
- Improved out-of-sample robustness by engineering a NumPy-based data augmentation pipeline and deployed the **2.6M parameter** model via TensorFlow Serving.
- Delivered structured agricultural treatment plans in **~160ms** by developing an async FastAPI microservice that routes CNN predictions to a local LLM.

Experience

Machine Learning Intern | SkillCraft Technology

June 2025 – August 2025

- Scaled image classification inference to **10,000+** daily requests by engineering a containerized FastAPI microservice for a core TensorFlow model.
- Reduced model deployment rollback times by **40%** (from 30m to 18m) by automating CI/CD pipelines with GitHub Actions, Docker, and TensorFlow Serving.
- Ensured 99% API uptime and data pipeline reliability by integrating Pytest and tracking model prediction drift, catching **15+** critical vulnerabilities before production.

Skills

Soft Skills: Problem-Solving, Technical Communication, Adaptability, Agile Collaboration

Languages: Python, C++, SQL

Machine Learning: PyTorch, TensorFlow, Scikit-learn, OpenCV, Pandas, NumPy, spaCy, NLTK

Generative AI: Hugging Face, LangChain, LangGraph, RAG, Ollama, Qdrant, Pinecone, LoRA, vLLM

MLOps & Cloud: AWS, Docker, FastAPI, Linux, CI/CD, GitHub Actions, MLflow

Developer Tools: Git, Pytest, Weights & Biases, REST APIs, Matplotlib

Certifications & Awards

- Secured **5th rank** at CodeSrijn 2026 National AI Hackathon among 50+ teams, built Datafort AI.
- Solved **700+ DSA problems** across platforms - Max Rating: **1576** at LeetCode, **1528** at CodeChef.
- Secured a **Global Rank 313** among 16,000 participants (Top 2%) in CodeChef Starters 243.
- Secured a **Global Rank 3,361** among 39,000 participants (Top 9%) in LeetCode Biweekly 185.
- CS50 AI with Python** certification by Harvard University.
- Introduction to Generative AI** certification by Google.
